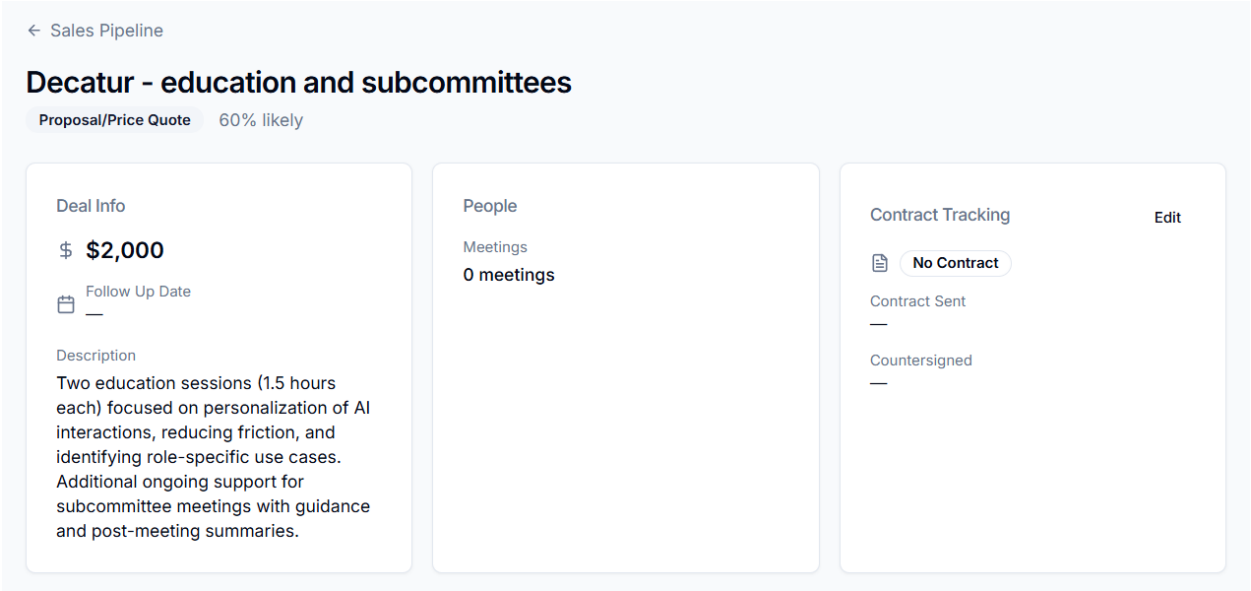
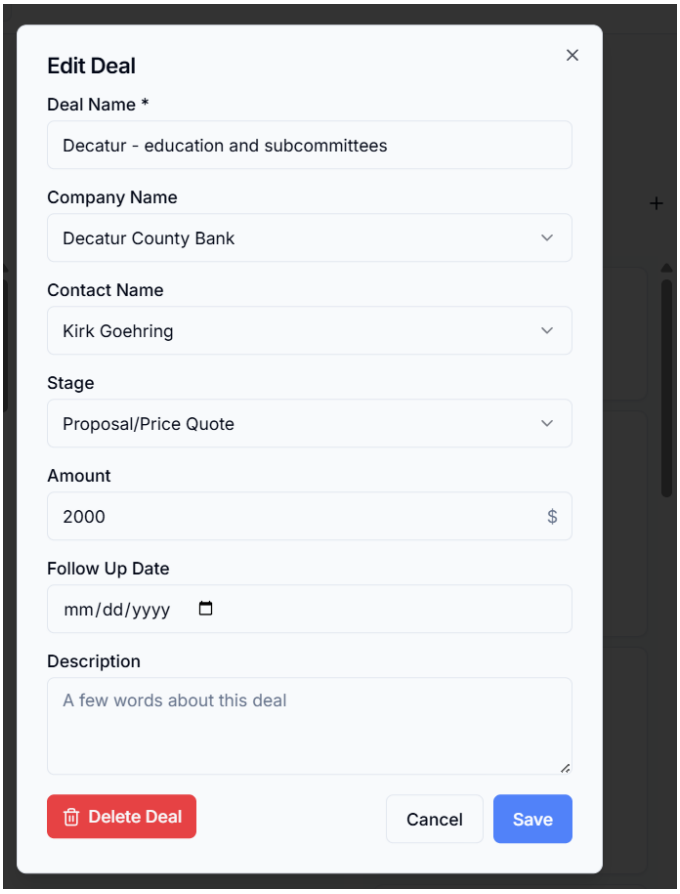
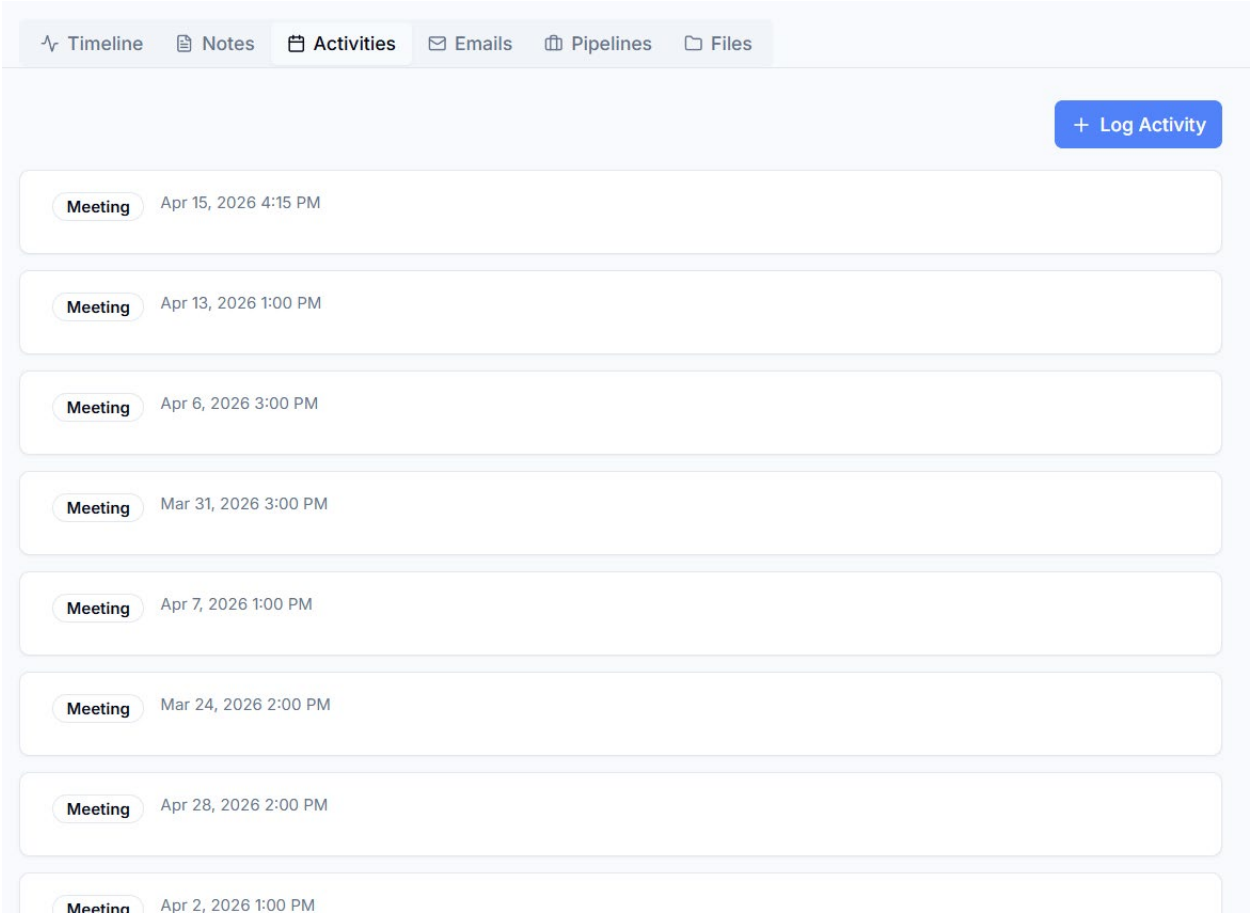
I need to be able to edit all parts of the deal when viewing it within the sales pipeline. We also need to be able to add files into this area.



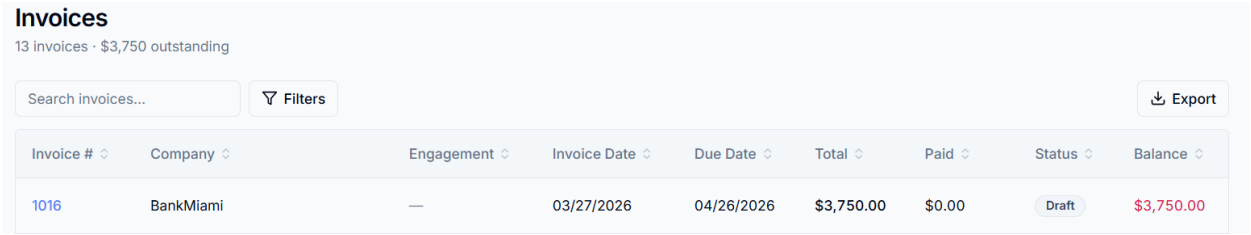
When editing a Deal, the only contact names I should be able to associate with the deal should be those associated with the company name



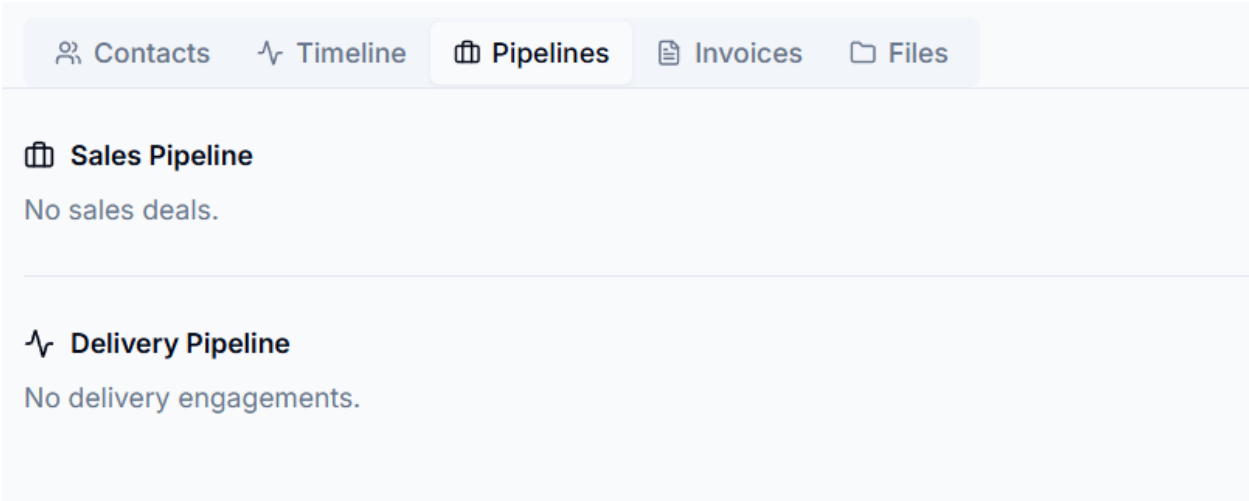
I need more information when we have a meeting in the activities: what kind of meeting was it (e.g. in person or virtual), other attendees if mentioned, where was it held, and the ability to add notes to the meeting after the fact

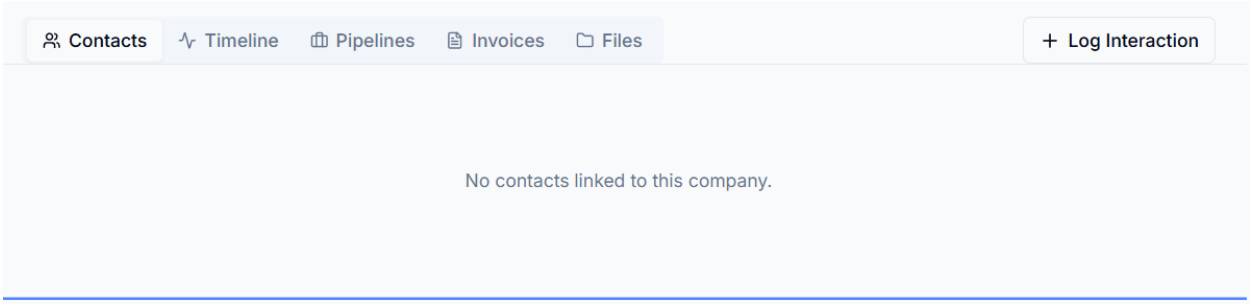


Where do I edit this information? This invoice has no information associated with it and I need to be able to associate it with the deal it is for. This is true for all of the existing invoices



I need to be able to add information into this area of the company profile.





I want to be able to add a new contact in the company profile
