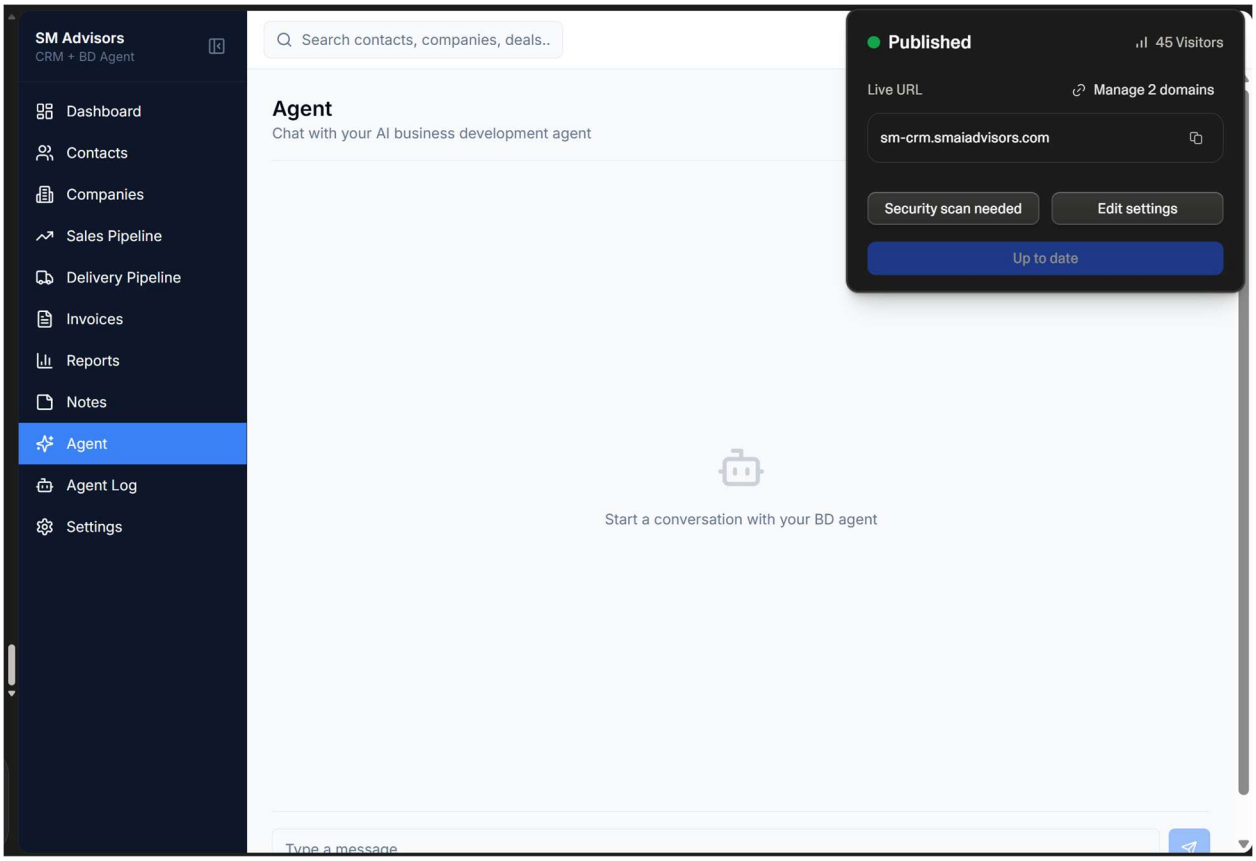
Remove the Agent Log. The new Agent replaces it. Also, rename Agent to Andrea Agent. Use the Andrea skill located here as an example. Update for her throughout the web app.



I want to create a button on the left pane for Engagement Letters page. The page should help a user prepare an engagement letter by allowing them to click radio dials for different services. I'm envisioning radio buttons that open based type of service. The user picks any options for the engagement and an engagement scoping document can be created. The radio buttons should be able to be added/modified/deleted by the user.

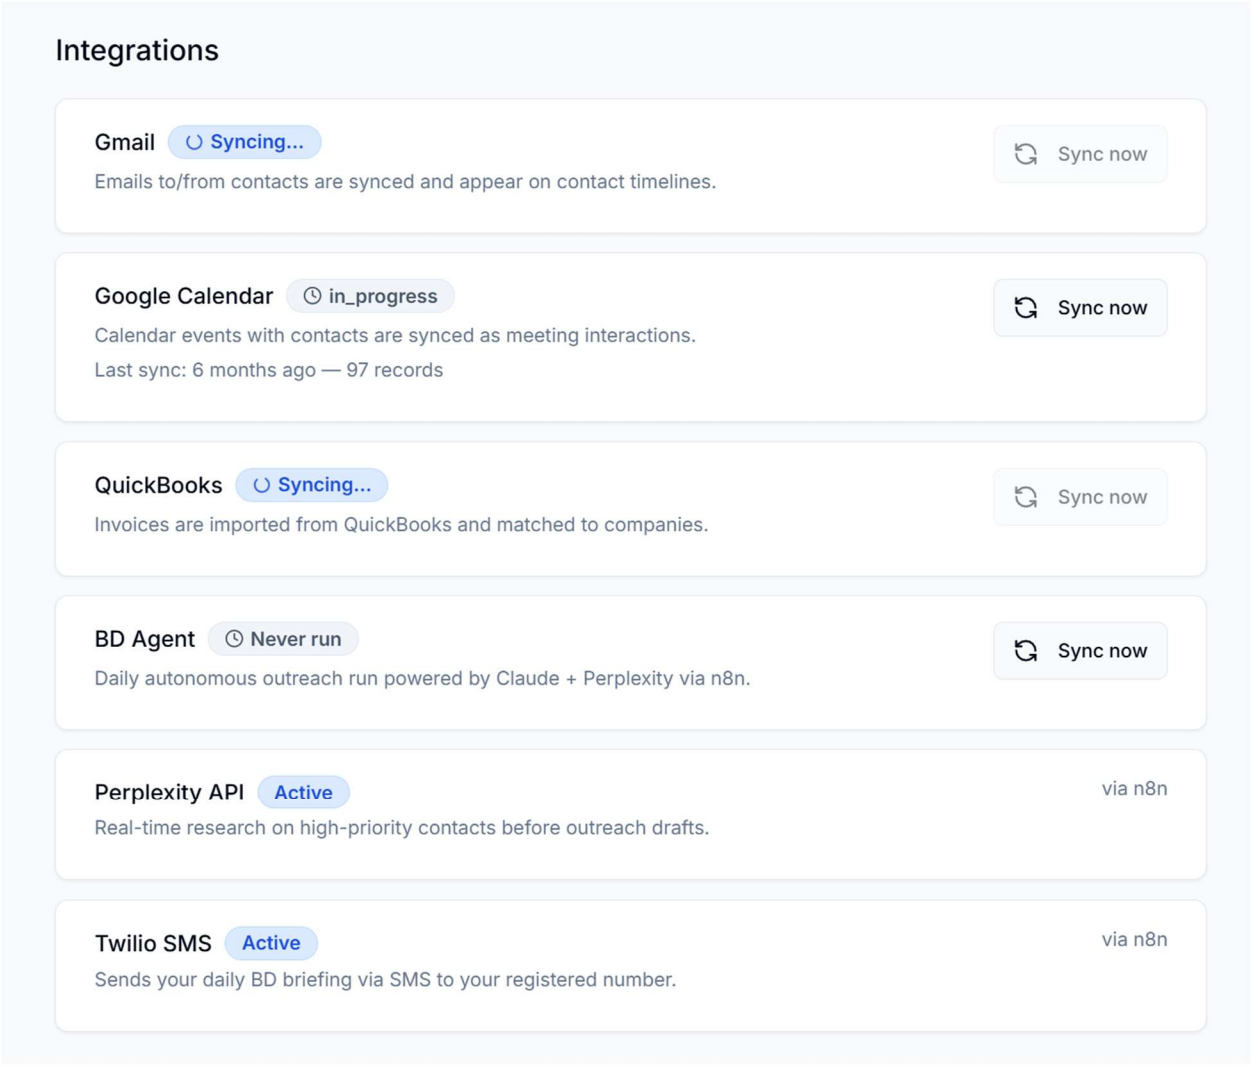
1. Enablement sessions
    a. (radio button) 1 session
        i. Session 1 - A focused, executive-level session designed to demystify AI, introduce practical governance structure, and equip leaders with a clear mental model for responsible AI use—without committing to a broader program.
    b. (radio button) 2 sessions –

        i. Session 1: Introduce foundational concepts, including common elements across major AI platforms, model selection, personalization, context, and conversational prompting.
        ii. Session 2: Build on that foundation through practical enablement, with emphasis on helping participants apply AI more effectively within their specific roles, improve work quality, accelerate thinking, and identify meaningful use cases in their own workflows.
    c. (radio button) 3 sessions
        i. Session 1: Introduce foundational concepts, including common elements across major AI platforms, model selection, personalization, context, memory, and conversational prompting. This session is intended to make AI feel accessible and useful while helping participants establish a practical baseline for day-to-day use.
        ii. Session 2: Build on that foundation through practical enablement, with emphasis on helping participants apply AI more effectively within their specific roles, improve work quality, accelerate thinking, and identify meaningful use cases in their own workflows. This session will focus on role-based application, reflection on real-world usage, and reducing friction in everyday adoption.
        iii. Session 3: Extend participant capability beyond one-off usage by introducing more repeatable ways to work with AI over time. This session will focus on writing stronger instructions, organizing ongoing context, and developing lightweight, role-relevant AI support structures that help participants use AI more consistently, efficiently, and strategically in recurring work.
2. Strategy and Roadmap
    a. (radio button) A structured, time-bound engagement designed to help leadership define where AI should be applied, why it matters, and how to proceed responsibly—before committing to tools, vendors, or large-scale investment.
3. Governance
    a. (radio button) A structured engagement to design and implement a lightweight, auditable AI Management & Governance System (AIMS) aligned with ISO 42001 principles and appropriate for a de novo or community bank.
    b. (radio button) A structured engagement to design and implement an auditable AI Management & Governance System (AIMS) aligned with ISO 42001 principles.
4. Wins

a. (radio button) Develop a series of skills for the organization to apply
b. (radio button) Develop a sharepoint based RAG database
c. (radio button) AI risk assessment and control mapping

When clicking in the left pane on Engagement Letters, there should be subheaders that open. There should be a spot to add a link to an engagement letter template in the Engagement Letters tab (should be readable/accessible from our Google Drive). There should be another spot to do the same linking for executed engagement letters. And the executed letters should be assigned to a Company within the CRM.

It doesn't appear that the syncing works, or that the sync now functionality works. Gmail and QuickBooks have had a blue pill that says "syncing" for days.



I don't believe the Twilio SMS is functioning. Check it to make sure the piping is operating and let me know if we need to continue building out something.

Also, lets change the API to do the real-time research to Claude Haiku 4.5.

The BD Agent seems to have been replaced by Andrea. If that's the case, remove the BD Agent throughout and update the infrastructure as necessary.

Remove CRM + BD Agent in the top left corner.
